- Speech to text for your everyday applications
- Easy to install and maintain
- Centralised management

4 Summary: Get documents done anywhere with Dragon Anywhere Mobile

Introducing Dragon Anywhere Mobile

Whether you're returning from a client meeting or just grabbing a coffee, being able to dictate, edit, and share documents in the moment can keep you productive, and your day moving forward. But basic, consumer-grade dictation tools and apps—with their lack of accuracy, and limited feature sets—can actually drain your time as you manually correct recognition mistakes.

Dragon Anywhere Mobile is different.

The benefits

Designed for busy professionals, Dragon Professional Mobile puts our leading speech recognition technology in your pocket, allowing you to rapidly create, manage and share documents of any length, almost anywhere.

All you need is an iOS or Android smartphone, and your voice.

The power of productivity, wherever you are

Ideas, conversations, information. They're all better captured in the moment. But by the time you've taken handwritten notes or recorded a voice memo and typed them up later, you could be spending hours of your week on a simple admin task. And that's before you've gone to the trouble of manually editing, formatting, and copying them to share with your colleagues.

With Dragon Anywhere Mobile, all this can be taken care of in one quick action. When you can dictate, format and share information simply by speaking, you can spend more time on tasks that demand your skills and expertise.

Work faster—with high accuracy, that only gets better

With mobile dictation tools, accurate speech recognition is essential. If you're constantly pausing to correct misheard words, the technology can quickly become as much a hindrance as it is a help.

Even if you're working in noisy surroundings, the app's built-in calibration will automatically adjust to focus on your voice, ensuring accurate dictation.

Dragon Anywhere Mobile is designed to be highly accurate from the moment you first launch the app. But we know every person speaks a little differently—with a different accent, different pronunciations, and preferred phrases. Through AI and deep learning, the Dragon engine adjusts to your speech profile over time, becoming even more accurate the more you use the app.

You can even teach the engine to recognise individual words and phrases that you know will be important, such as common industry-specific terminology. To help you complete your documents faster, Dragon Anywhere Mobile lets you add long phrases or boilerplate text with simple verbal shortcuts, work directly in your organisation's templates, and navigate forms using your voice.

Collaborate through the cloud

It's so much easier to be productive when you can capture important information quickly, while it's fresh in your mind. But being able to share it just as quickly and easily? That's what really accelerates your working day.

Dragon Anywhere Mobile lets you use voice commands to email your dictated documents to your clients or colleagues, or save them to your shared cloud storage.

Device-friendly dictation. Work in the way that suits you—the Dragon Anywhere Mobile is compatible with both iOS and Android devices.

The features

Up to 99% accuracy from day one

We've spent years refining our speech recognition engine, so Dragon Anywhere Mobile gives you up to 99% recognition accuracy from the second you download and launch the app—and only gets more accurate, the more you use it.

Even if you're working in noisy surroundings, the app's built-in calibration will automatically adjust to focus on your voice, ensuring accurate dictation.

Any-length documents

Speak for as long as you need with Dragon Anywhere Mobile. With no limits on dictation or document length, you can create short notes and reminders, reports that contain thousands of words, or anything in between.

And the app doesn't just offer support for basic text documents. It also includes native support for fillable forms and your organisation's pre-designed templates, which you can easily navigate using voice commands like "next field".

Simple but powerful editing tools

With Dragon Anywhere Mobile, there's no need to move between apps to make edits to your speech-to-text documents—and in many cases, you won't even need to touch the screen. Use voice commands like "change that" to select and edit text directly, including punctuation and formatting.

Plus, with the new Correction Menu, you can swap out words and fix misspellings in seconds. Select a word, and Dragon Anywhere Mobile will offer context-aware options for you to choose from.

Feature demo: Correction Menu. See the Correction Menu in action in the quick demo video.

Dragon Anywhere Mobile

Easy customisation

It's not just individuals that have their own vocabularies—the Dragon engine is designed to adapt to different industries, too. You can tailor Dragon Anywhere Mobile to your role by training the engine to recognise industry-specific terms, acronyms or titles.

Using the Train Words menu, you can add individual words or phrases to the engine's vocabulary to boost accuracy—such as department names, equipment types, products, and more. You can even set up short commands that automatically translate into longer phrases, so the engine can autofill common phrases and add boilerplate or signatures to your document or correspondence in seconds.

Built-in multitasking

Need to use another document as reference? Tired of switching between apps to check details, quote articles, or copy notes?

With iOS and Android's native multitasking capabilities, you can use Dragon Anywhere Mobile in split-screen, side by side with any other app. So, there's no need to manually open and close apps as you work—it's right there in front of you

Native sync and share

With Dragon Anywhere Mobile, it's as easy to share documents as it is to create them. You can share with colleagues and clients alike through email, Microsoft OneDrive, and Dropbox, using voice commands.

And, if you're using Evernote on an iOS device, you can even synchronise all your dictated notes—so they're instantly available on all your devices, wherever you are.

You can use your Dragon Anywhere Mobile account across multiple mobile devices, so you can easily switch between your smartphone and tablet when working on a document. And when you're ready to work on your laptop or desktop computer, simply sync Dragon Anywhere Mobile with Dragon Professional Anywhere to access your dictionary additions and customisations from the desktop app.

Open up your documents from OneDrive, Dropbox, or Evernote, and your tailored experience will be ready for you.

Dragon Anywhere Mobile

Dragon Professional Anywhere

You can link Dragon Anywhere Mobile to Dragon Professional Anywhere, our fully featured desktop app, for voice-led productivity across your devices.

Fast, accurate, and fully customisable

Just like Dragon Anywhere Mobile, Dragon Professional Anywhere delivers highly accurate speech recognition out of the box, with customisation options and speech profiles that you can sync across multiple devices—including virtualised desktops.

Speech to text for your everyday applications

Dragon Professional Anywhere can sit on top of all your organisation's applications, adding speech recognition capabilities to all your everyday tasks. As well as dictating directly into word processors, spreadsheets, email clients, and collaboration tools, you can use Dragon Professional Anywhere to send emails and search the web using verbal commands.

Easy to install and maintain

Available for on-premises, cloud, and hybrid deployments, Dragon Professional Anywhere integrates neatly with your organisation's infrastructure. And once it's live, you'll automatically get patches and updates to ensure you're always using the latest version—without adding admin for your IT team.
