FastReset: voice powered, self-service password reset.

Enables organizations up to 99%+ self-service rate for password reset – no IT helpdesk needed.

Resetting passwords through the IT helpdesk is a tedious and costly process. Yet standard self-service password reset solutions typically fail to deliver on promised results as they rely on users answering secret questions – which they are unlikely to remember when the time comes to reset their password. The result, is continued calls to the IT helpdesk.

Nuance’s FastReset solution provides a fully automated, self-service password reset function that requires no knowledge from the user. To reset their password, a user is prompted to speak a common passphrase, such as “My voice will reset my password”, and through voice biometrics, the user’s identity is validated and their password reset.

**FastReset - key benefits**
- **Make password reset easy.** Eliminate the need for an IT helpdesk call – make resetting a password literally as easy as speaking “My voice will reset my password”
- **Reduce IT helpdesk costs.** By eliminating the need for IT helpdesk agents to reset passwords, an organization can save up to 40% of helpdesk tickets
- **Enhance security.** Make the password reset process your most secure internal IT process with two-factors of authentication
FastReset can enable your organization to achieve a 99%+ self-service rate for password reset, delivering cost savings for the IT helpdesk while improving productivity of employees.

**Key Features**

- **Windows credential provider interface.** With FastReset employees can simply click on an icon within the Windows lock screen to initiate the password reset process.

- **Outbound call enables two-factor authentication.** FastReset initiates an outbound call to an employee registered phone number, delivering two-factors of authentication by validating something that the user has (their phone) as well as something that the user is (voice biometric).

- **IT helpdesk IVR integration.** FastReset can be integrated to your organization’s IT helpdesk IVR, ensuring that employees that do call the IT helpdesk reset their password in a fully automated self-serve manner.
