

# Eliminate paper forms and streamline work.

Don't let forms slow you down! Save time and costs with intelligent e-Forms.

## **Go paperless and collect complete and accurate data more efficiently.**

Forms have been used for many years, as they provide a clear and simple way to collect patient and staff data. However, paper forms are time-consuming and expensive to manage, and they require additional effort to read, analyse and distribute the information contained within the document.

Dragon Medical Forms is a web-based electronic forms solution that empowers healthcare organisations to eliminate pre-printed paper forms and streamline processes enterprise-wide, saving time and costs.

Dragon Medical Forms eliminates the many problems associated with completing, managing and distributing paper form-based data, including:

- Staff accessibility to forms
- The ability to quickly capture data and physician signatures at the point of care
- Having a centralised and streamlined workflow process for handling forms
- Clinical risk of misplaced forms and data errors when re-entering paper form data into a digital format
- The capability to integrate with EHRs and other information systems to unify data collection
- The ability to automate the delivery of forms to the recipients that need them

## **Improve data entry with voice-enabled e-Forms built for healthcare.**

Dragon Medical Forms has the added power of Nuance's industry-leading speech recognition software, Dragon Medical SpeechKit. The speech-enabled e-Forms use the latest AI-based speech recognition technology to speed up form completion, allowing healthcare providers to complete work more efficiently and accurately.

Beyond simply recording speech, Dragon Medical Forms' built in speech recognition capabilities drive secure, intelligent voice-enabled workflows with features such as Auto-texts, custom medical vocabularies, voice correction capabilities and more — empowering clinicians to work 3x faster.

## **Integrate forms with your EHR and other Health Information Systems.**

Dragon Medical Forms integrates easily with all major healthcare and business systems—so your organisation can free itself from paper-heavy processes and support more mobile-friendly business initiatives.

Dragon Medical Forms can integrate with your HIS, EHR, PAS and other technologies—reducing data duplication and errors, improving patient safety and optimising your current investments.

---

## **Spend less time managing forms and data entry and more time treating patients and performing core tasks. Dragon Medical Forms improves the efficiency of your clinicians by automating forms and manual processes.**

- Reduce inefficient and paper-heavy processes
  - Improve staff accessibility to forms and boost productivity
  - Use speech recognition technology to complete forms faster
  - Automatically deliver forms to the people and systems that need them
  - Integrate with key information systems and unify data collection
  - Capture information and e-Signatures at the point of care
  - Improve patient safety and satisfaction, while reducing risk
-

### **Easily create your own forms to meet your organisation's requirements**

Every form is custom designed to match the end user's specific requirements. There's no limit to the kind and number of forms they can create and use. Customers can create forms that mirror existing paper forms, with the added benefit of electronic binding to extra patient data that is pre-populated before they start—saving time and reducing the chance of errors or omissions.

### **Centralised form management and distribution**

Dragon Medical Forms' technology allows healthcare organisations to add, edit and manage their e-Forms for use throughout their Hospital, Clinic and Community. Central Forms Management means new forms, or changes to existing forms, can be made quickly and easily and are immediately available to clinical staff.

### **Hospital automation and process improvement**

Using virtually any device that can access the internet and from any location, clinicians can quickly access the right e-Forms, collect information and capture signatures without printing or scanning.

The e-Forms are transferred to the right person or information system intelligently, enabling fast communication, collaboration and approvals that improve patient care.

Completed forms are quickly distributed to the required destination through a variety of media that the end user chooses. Formats include PDF, DOCX or RTF files, or as structured segments via HL7, CDA, FHIR, XML, JSON, etc.

### **Forms that meet your organisation's needs**

Dragon Medical Forms are custom and designed to match an organisation's specific requirements. Example forms include:

- Nursing visit records/notes
- Doctors' notes from patient visits
- Progress notes
- Discharge summaries
- Physical forms
- Case management forms
- Violent patient forms
- Supply order forms
- Employee forms
- Referral forms
- And More!

### **Supported technology and languages.**

#### **Supported Browsers**

- Chrome (Desktop)
- Internet Explorer 11 (Desktop)
- Chrome (Android)
- Safari (iOS)

#### **Applications**

- Android PWA (App), installed through browser

#### **Languages**

Dragon Medical Forms is available in English, French and German, and the displayed language is based upon the user's browser settings (i.e., the language the browser is configured to display in).

#### **Supported Dictation Devices**

- Philips SpeechMike
  - Nuance PowerMic
-
