Comprehensive clinical documentation on your mobile device

eScription One Mobile maximises clinician efficiency and convenience with anytime, anywhere, voice-driven documentation.

High quality patient care is the goal of every hospital. And medical documentation is at the heart of it all. It has to be thorough, accurate and timely. How can clinicians keep up with the documentation that accompanies demanding patient loads and still have time to provide patient-focused care?

**Speech. It’s the fastest way to communicate**
So why not leverage the power of voice when creating documentation? Even better, use a mobile application, and you have efficiency and convenience combined in one easy-to-use documentation solution. Dictation created with a powerful mobile application integrates seamlessly into a clinician’s existing process and workflow. Clinicians can record detailed narrative information and create comprehensive patient records from any location at any time—at the hospital, in the clinic, at home, or anywhere in between.

Nuance eScription One Mobile allows clinicians with iOS or Android devices to manage their documentation from anywhere using a Wi-Fi network or cellular data connection. Clinicians using eScription One Mobile save time, increase report accuracy and improve document turnaround times. Furthermore, online app store and market installation minimises demand on IT resources.

**Easy documentation creation**
Clinicians leverage the touch-based interfaces of smartphones and tablets to efficiently create dictations. The intuitive interface requires minimal clinician training.

Authorised users access an up-to-date outpatient appointment schedule or an inpatient list that can serve as a convenient worklist. Tapping on an appointment or patient name initiates the dictation process and automatically associates key patient data with the dictation. A library of document work types and dictation templates speeds documentation while patient demographics and historical documentation can be reviewed while dictating.

---

**Key features**
- Flexible workflow options suit administrative and clinician needs.
- Real-time schedule or patient list serves as a convenient work list.
- System templates streamline document creation.
- Historical patient information available for review while dictating.
- Simplified edit and approval process decreases turnaround times, speeds availability of data in the EMR.
- Authentication automatically triggers distribution to print, fax or populate the EMR.

**Key benefits**
- Increases clinician convenience and satisfaction.
- Enhances clinician productivity.
- Improves documentation turnaround time and accuracy.
- Bolsters high-quality dictation capture.
- Enables comprehensive documentation.
- Supports EMR adoption with sophisticated integration.
Customised settings to optimise workflow

Individual users can customise application settings to mirror their current workflow and provide easy access to the most-used features. Clinicians can view preferred document templates and create an unlimited number of dictation templates that guide content and only require dictating exceptions.

Safe, secure distribution

Transcribed content is easily reviewed, edited, signed on the mobile device, and then automatically delivered to the electronic medical record (EMR). With over 1,600 interfaces for hundreds of different EMRs, transcription content can automatically be placed in a specified format and location as a narrative report or structured document. Documentation can also be automatically forwarded to referring clinicians or routed for auto-faxing or printing.

eScription One Mobile is a safe, secure application that complements EMR use by simplifying the documentation task and supporting thorough, high quality documentation that powers clinician productivity and improved patient care.
