

Efficiently and accurately document the entire patient encounter.

Comprehensive and intuitive clinical documentation — with flexible workflows for hospitals.

Challenge.

How do clinicians tackle the competing demands placed upon them by the increasing volume of clinical documentation within the EPR and the need to focus on improving quality and outcomes for patients?

Solution.

Dragon® Medical eScription UK is a comprehensive, web-based clinical documentation solution that simplifies the documentation process with automated, flexible workflow options designed for hospitals. Clinicians can accurately document entire patient encounters using a mobile device or via standard dictation methods, generating structured data that can be delivered to the EPR. Dragon® Medical eScription UK improves clinician productivity while enhancing the patient narrative, allowing them to focus on patient care.

Dragon® Medical eScription UK

Mobile allows clinicians to create accurate patient documentation while on the go. Rather than navigating a complex and time consuming EPR during an exam, clinicians can focus their attention on the patient instead, utilising a mobile device to dictate entire or partial encounters. Documentation can be reviewed, edited, electronically signed and automatically printed or faxed—all with the touch of a finger.

Dragon® Medical eScription UK

enables discrete data extraction from the clinical narrative. Healthcare providers can continue to dictate—maximising productivity— while taking full advantage of an implemented EPR. Our fully-automated process can identify discrete information contained within the note and upload the data into the EPR through a secure interface. The proper fields of the EPR are automatically populated, so clinicians can create reports and search data within a patient's record.

A double layer of security protects your documentation. Our solutions protect patient information and uptime to ensure that this information is readily available to you. Nuance maintains completely redundant data centers to ensure 24x7 accessibility. In the unlikely event that the primary data center goes offline, the secondary data center will handle the transactions and Internet traffic.

Key benefits

- Reduces administrative costs.
- Protects the patient narrative.
- Improves EPR adoption/usage.
- Supports varying hospital workflows.
- Reduces document turnaround time.
- Increases clinician productivity.
- Economic and flexible.

Key features

- Dictate, review, edit and eSign documents from mobile application.
 - Generates structured data that can be delivered to the EPR.
 - Manage the transcription and document workflow via a web-based portal.
 - End-to-end workflow management.
 - Dedicated client care.
 - All inclusive solution components.
 - Discrete data extraction from the clinical narrative.
-

All-inclusive solution components.

- **Dragon® Medical eScription UK Mobile** gives clinicians the ability to fully document patient encounters using only a mobile device.
- **InQuiry** enables medical facilities to manage their day-to-day documentation workflow—efficiently and effortlessly.
- **InSync** automatically uploads dictations from digital recorders to the Dragon® Medical eScription UK servers, effortlessly and seamlessly.
- **InTouch** allows healthcare professionals to dictate over the phone, increasing their comfort and productivity.
- **ShadowLink** automates secure interfaces between medical facilities and the Dragon® Medical eScription UK servers, providing communication efficiency and protection.
- **ShadowPrint** automatically prints documents with a variety of setting parameters, a flexible feature that saves time.

Nuance teams are always available to provide and scale to the level of support your organisation needs—quickly adapting to new medical environments to provide the best transcription support available. The result is a combination of unparalleled consistency, quality and efficiency that can be measured in faster turnaround times, reduced costs and increased productivity.
