Proactive engagement
Message On Demand.
Communicate with consumers in real-time over multiple channels.

Message On Demand is a fast-to-deploy, cloud-based application that lets you quickly create, modify and send multi-channel messages from an intuitive self-service user interface.

We live in an age of instant information. Consumers are increasingly mobile and expect “anytime, anywhere” interaction, especially for time-sensitive information. But finding a flexible, cost-effective solution for real-time communications can be a challenge for many companies.

Nuance Message On Demand allows you to quickly compose and send voice, email, text messages or push notifications within an intuitive user interface that puts everything you need at your fingertips—and you are in control. It’s simple to integrate and quick to deploy, with minimal IT support needed, so there’s less disruption to your business from both a financial and operational perspective.

Reach mobile consumers on more channels.
Message On Demand works over four channels—voice, email, text and smartphone push—so you can reach people on their preferred channel with personalized, timely and contextual messages for the greatest likelihood of a response.

How it works.
Message On Demand deployment is simple: Create and modify message content on the fly, upload contact lists, and send communications immediately over multiple channels. And because Message On Demand is a cloud solution, it’s available anytime, anywhere and with real-time delivery.

Key benefits
- **Easy to use, cost-effective ad hoc messaging** accessible from a cloud-based UI
- **Quickly create or modify communications** and change messaging as needed
- **Maximize reach using multiple channels**, including one-way voice, text, email, and push notifications
- **Boost performance results** and achieve business goals with best in class interaction analytics and reporting
- **Application set up-to-deploy within 30 days** with minimal cost and impact on IT resources
