Create your own conversational AI apps with Nuance Mix

Harness the power of best-in-class speech recognition, speech synthesis, and NLU for enhanced customer experiences.

Want to build your own enterprise-grade, AI-powered apps, while developing your in-house skills? Introducing Nuance Mix—your single DIY platform for building, testing, deploying, and optimizing applications that harness best-in-class, proven, conversational AI.

Nuance Mix gives you the control, flexibility, and freedom to build the way you want, with world-leading speech and NLU capabilities, speech synthesis and NLU capabilities, and the support of our UI/UX design, integration and optimization experts.

Nuance Mix also lets you build on your existing application investments and deliver phased migrations from traditional IVR to conversational IVR—and beyond. In this way you can improve customer experience, while keeping costs in check.

One platform for the entire development lifecycle (and all your channels)
Nuance Mix gives you direct API access to conversational AI capabilities, and proven app-building tools across the entire application development lifecycle.

Nuance Mix is a best-in-class development platform –
- Speech-to-text & Text-to-speech
- NLU
- APIs/Microservices
- Dialog
- Test
- Dashboard
- Tutorials & forums

Only Nuance offers –

Open-ended, conversational dialogues
Allow your customers to speak freely and in their own words—whether they’re talking to an FAQ-type VA or a highly personalized, transactional bot or IVR.

Full lifecycle support
Nuance Mix isn’t just for developers and speech scientists. It supports the whole software development lifecycle allowing business stakeholders, testers, and Q&A to work within the same tool—accelerating time to market.

Leading brands have built a better customer experience with Nuance Mix. What will you build?

Financial institutions have built branded voice experiences for virtual assistants

Leading airlines have modernized IVRs from directed dialogue to NLU

Transportation providers have transformed their announcement notifications with the help of text-to-speech technology

Gaming companies have improved accessibility with speech technology

Film distributors have used speech capabilities to reduce the cost of dubbing

Pharmacies have installed voice-enabled kiosks in their branches to improve their customer experience

Nuance Mix is a complete platform designed for –
- Business stakeholders
- Voice & chatbot designers
- Developers
- Data & speech scientists
- Testing & QA
Freedom of deployment
Deploy your applications on the platform of your choice—on premises or in the cloud, hosted by Nuance or your preferred third-party hosting provider.

Full omnichannel support
Reduce costs and improve CX by creating advanced conversational experiences across IVR, web chat, messaging, smart speakers, and more—all within a single conversational AI project.

Control dashboards
Organize and manage user access, conversational AI projects, and deployments all in one place.

Automated testing
Use built-in automation to test drive your applications across all channels, verifying all possible paths before an application goes into production—so you get a higher-quality app to market faster.

Over 25 years’ experience
Delivering proven results for some of the world’s leading enterprises.

One platform for learning and collaboration
With Nuance Mix, you get a single platform for learning and collaboration.

A unique collaboration and support model
You’ll own your projects, but you won’t have to face any challenge alone. You’ll be able to draw on our deep experience in speech and data science and UI/UX design, through close collaboration with our Professional Services team. Choose as much or as little help as you need.

Expert-built models, in-depth tutorials, and community forums
To help everyone on your team get up to speed quickly, and continually improve their skills.

Build once, deploy many times
Once you’ve built an application, you can quickly tailor it for deployment in multiple languages, across multiple engagement channels, from IVR to web. Your customers will enjoy a truly channel-less experience—through consistent, intuitive conversational AI—however they get in touch.
