

Create comprehensive clinical documentation on your mobile device

eScripton One Mobile maximizes clinician efficiency and convenience with anytime, anywhere, voice-driven documentation.

High quality patient care is the goal of every healthcare facility. And medical documentation is at the heart of it all. It has to be thorough, accurate and timely. How can physicians keep up with the documentation that accompanies demanding patient loads and still have time to provide patient-focused care?

Speech. It's the fastest way to communicate

So why not leverage the power of voice when creating documentation? Even better, use a mobile application, and you have efficiency and convenience combined in one easy-to-use documentation solution. Dictation created with a powerful mobile application integrates seamlessly into a clinician's existing process and workflow. Physicians can record detailed narrative information and create comprehensive patient records from any location at any time—at the hospital, in the clinic, at home, or anywhere in between.

Nuance eScripton One Mobile allows medical providers with iOS or Android devices to manage their documentation from anywhere using a Wi-Fi network or cellular data connection. Clinicians using eScripton One Mobile save time, increase report accuracy and improve document turnaround times. Furthermore, online app store and market installation minimizes demand on IT resources.

Easy documentation creation

Clinicians leverage the touch-based interfaces of smartphones and tablets to efficiently create dictations. The intuitive interface requires minimal clinician training.

Authorized users access an up-to-date clinic appointment schedule or an inpatient list that can serve as a convenient worklist. Tapping on an appointment or patient name initiates the dictation process and automatically associates key patient data with the dictation. A library of document work types and dictation templates speeds documentation while patient demographics and historical documentation can be reviewed while dictating. Unlike dedicated mobile dictation devices that require docking stations and introduce upload delays, the voice file is automatically and securely transferred for transcription with a touch of a finger.

Key features

- Flexible workflow options suit administrative and clinician needs.
- Real-time schedule or patient list serves as a convenient work list.
- System-generated templates streamline document creation.
- Historical patient information available for review while dictating.
- Simplified edit and approval process decreases turnaround times, speeds availability of data in the EHR.
- Authentication automatically triggers distribution to print, fax or populate the EHR.

Key benefits

- Increases clinician convenience and satisfaction.
 - Enhances clinician productivity.
 - Improves documentation turnaround time and accuracy.
 - Bolsters high-quality dictation capture.
 - Enables comprehensive documentation.
 - Supports EHR adoption with sophisticated integration.
-

View real-time appointment schedule or inpatient list

Consult patient data and historical documentation or document and dictation templates while dictating

Review transcribed documentation and make edits

Complete documentation by signing and triggering automatic placement in the EHR

Customized settings to optimize workflow

Individual users can customize application settings to mirror their current workflow and provide easy access to the most-used features. Clinicians can view preferred document templates and create an unlimited number of dictation templates that guide content and only require dictating exceptions.

Safe, secure distribution

Transcribed content is easily reviewed, edited, signed on the mobile device, and then automatically delivered to the electronic health record (EHR). With over 1,600 interfaces for hundreds of different EHRs, transcription content can automatically be placed in a specified format and location as a narrative report or structured document. Documentation can also be automatically forwarded to referring physicians or routed for auto-faxing or printing.

eScription One Mobile is a safe, secure application that supports HIPAA compliance and complements EHR use by simplifying the documentation task and supporting thorough, high quality documentation that powers physician productivity and improved patient care.
