

# Results-driven radiology for improved outcomes mPower Clinical Analytics

Harnessing advanced language understanding and cloud technology for data-driven competitive advantage.

## The transition to value-based imaging requires a new approach

Today's radiologists must not only monitor and improve clinical quality and help assure patient safety, they must also analyze patient outcomes and report on outcomes measures—all while optimizing their own productivity. Data alone can't achieve this; radiologists need powerful tools to extract, aggregate, analyze, and report on the data.

## Powerful tools support improved outcomes

Nuance mPower Clinical Analytics unlocks actionable information that maximizes productivity and facilitates the transition to value-based imaging.

- **Enterprise search.** Proprietary search and natural language processing (NLP) accelerate access to detailed, actionable information in radiology reports and other clinical data sources.
- **Quality analytics.** Easy-to-use tools enable radiology practices to profile and validate performance and clinical outcomes, and affirm radiologists' value in the care continuum.
- **Business analytics.** Detailed reports uniquely support radiology practices in optimizing and refining business processes and improving operational efficiency.
- **Findings analytics.** NLP-driven algorithms allow size-based measurement extraction and tracking to facilitate outcomes reporting and quality improvement.

## Insights, not just data

mPower Clinical Analytics takes the unstructured radiology report narrative and uses powerful language understanding algorithms to provide valuable insight. mPower's interactive approach instantly provides easy-to-understand, detailed, and actionable information that eliminates the time-consuming, iterative process typical of data analysis, and provides you with an unmatched look at your institution's quality and productivity.

## Power in the cloud

mPower's new cloud-hosted platform provides advanced features and tools to further support your analytics efforts. These capabilities give you the data and understanding you need to deliver results-driven radiology services and optimal patient care.

## Outcomes

Success in the era of value-based care requires radiology to contribute to improved patient outcomes. By applying robust analytics you can drive key outcomes like the following:

- **Monitor and close the loop on follow-up recommendations.** Using proprietary language understanding technology, mPower Clinical Analytics automatically extracts follow-up recommendations from reports and identifies overdue examinations to avoid adverse outcomes and to reduce medicolegal risk. Users can now easily communicate follow-up recommendations through PowerConnect Actionable Findings.

Reduce length of stay

Improve compliance

Increase revenues

Decrease errors and medicolegal risk

Evaluate outcomes and quality

Optimize productivity and efficiency

Improve follow-up consistency and compliance

“NLP search technology can double or triple the positive impact of recommendation tracking systems when used in conjunction with radiologist-initiated entry. Adding this technology is projected to add over \$150,000 in new technical revenue in the coming year.”

Ben Wandtke, MD, MS, Chief of Diagnostic Imaging, FF Thompson Hospital  
Associate Professor, Department of Imaging Sciences, University of Rochester Medical Center

– **Reduce length of stay.** By tracking inpatient recommendations and facilitating care coordination, mPower Clinical Analytics has helped decrease length of stay up to three days for patients needing interventional procedures.

– **Reduce inappropriate imaging**  
mPower Clinical Analytics can help identify outliers, guide quality improvement efforts, and reduce unnecessary ordering.

– **Increase practice profitability**  
mPower helps practice managers develop an operationally efficient organization that profitably delivers effective clinical care.

**Mobilize for success with advanced analytics**

– Extract specific measurements easily from narrative text to drive clinical and quality improvements.

– Identify variability in follow-up recommendations to reduce over- and under-recommendations for improved utilization and care delivery.

– Analyze multiple variables simultaneously, build custom graphs, and display cumulative data with ease.

– Harness the power of sophisticated quality control algorithms

to optimize clinical and financial performance, including:

- Laterality and sex mismatch
- Ultrasound code mismatch
- Critical results and notification documentation
- Follow-up detection with auto-closure
- MIPS compliance

**Benefits of mPower cloud platform**

Nuance’s premier clinical analytics solution now harnesses the secure and robust technology of Microsoft Azure, Nuance’s cloud computing partner. Advantages of a cloud-hosted environment include:

- Faster innovation delivery and easier upgrades to minimize service disruptions
- Enhanced security with industry-leading cloud platform technology
- Reduced total cost of ownership with smaller IT footprint and reduced maintenance burden

Nuance values data privacy and does not keep your data longer than reasonably necessary. Our data retention policy defaults to 7 years within the hosted environment.

**About Nuance Communications, Inc.**

Nuance Communications, Inc. is a leading provider of voice and language solutions for businesses and consumers around the world. Its technologies, applications and services make the user experience more compelling by transforming the way people interact with devices and systems. Every day, millions of users and thousands of businesses experience Nuance’s proven applications. For more information, visit [www.nuance.com/healthcare](http://www.nuance.com/healthcare) or call 1-877-805-5902. Connect with us through the healthcare blog, [What’s next](#), [Twitter](#), [LinkedIn](#) and [Facebook](#).
