The transition to value-based imaging requires a new approach
Today’s radiologists must not only monitor and improve clinical quality
and help assure patient safety, they must also analyze patient outcomes
and report on outcomes measures—all while meeting business goals.
Data alone can’t achieve this; radiologists need analytics
capabilities to extract, aggregate, analyze, and report on the data.

Powerful tools support improved outcomes
Cloud-hosted mPower Clinical Analytics unlocks actionable information
to deliver improved clinical and financial outcomes and facilitate the
transition to value-based imaging.

– Enterprise search. Proprietary search and language understanding technologies accelerate access
to detailed, actionable information in radiology reports and other
clinical data sources. With these capabilities you can easily collect
and aggregate clinical and performance data, and even build your
own data sets for validation of AI algorithms in your clinical setting.

– Quality analytics. Easy-to-use tools enable radiology practices to
profile and validate performance and clinical outcomes and affirm
radiologists’ value in the care continuum.

– Findings analytics. Language processing algorithms allow
size-based measurement extraction and tracking to facilitate
outcomes reporting and quality improvement.

– Business analytics. Detailed reports uniquely support radiology practices in optimizing and refining
business processes.

Insights, not just data
mPower Clinical Analytics takes the unstructured radiology report narrative and harnesses cloud-powered
language understanding algorithms to provide valuable insight. mPower’s interactive approach instantly
provides easy-to-understand, detailed, and actionable information that eliminates the time-consuming,
iterative process typical of data analysis, and provides you with an
unmatched look at your institution’s report quality and business performance.

Outcomes
Success in the era of value-based care requires radiology to contribute to
improved patient outcomes. By applying robust analytics, you can drive key outcomes such as:

– Monitor and close the loop on follow-up recommendations.
Extract follow-up recommendations from reports and identify overdue examinations to avoid adverse
outcomes and reduce medico-legal risk. mPower can populate the
PowerScribe Follow-up Manager worklist to facilitate follow-up
tracking to reduce time-consuming manual processes.
“NLP search technology can double or triple the positive impact of recommendation tracking systems when used in conjunction with radiologist-initiated entry. Adding this technology is projected to add over $150,000 in new technical revenue in the coming year.”

Ben Wandtke, MD, MS, Chief of Diagnostic Imaging, FF Thompson Hospital
Associate Professor, Department of Imaging Sciences, University of Rochester Medical Center

- **Reduce length of stay.** Track inpatient recommendations to help facilitate care coordination. mPower Clinical Analytics has helped decrease the length of stay up to three days for patients needing interventional procedures.

- **Reduce inappropriate imaging.** Identify outliers, guide quality improvement efforts, and reduce unnecessary ordering.

- **Increase practice profitability.** Analyze and monitor processes to drive performance improvement and more profitably deliver effective clinical care.

**Mobilize for success with advanced analytics**
- Extract specific measurements easily from narrative text to drive clinical and quality improvements.
- Build custom data sets to evaluate and validate AI algorithms within your clinical setting.
- Identify follow-up recommendation variability to reduce over- and under-recommendations for improved utilization and care delivery.
- Analyze multiple variables simultaneously, build custom graphs, view real-time dashboards, and display cumulative data with ease.
- Harness sophisticated quality control algorithms to optimize clinical and financial performance, including:
  - Laterality and sex mismatch
  - Limited vs. complete ultrasound mismatch
  - Critical results and notification documentation
  - Follow-up detection with auto-closure
  - MIPS compliance

**Power in the cloud**
Nuance mPower now harnesses the secure and robust technology of Microsoft Azure, Nuance’s cloud computing partner. Our cloud-hosted platform provides advanced features and tools to support your analytics efforts further, giving you the data and understanding you need to deliver results-driven radiology services and optimal patient care. Benefits include:
- Faster innovation delivery and easier upgrades to minimize service disruptions.
- Enhanced security with industry-leading cloud platform technology.
- Reduced total cost of ownership with smaller IT footprint and reduced maintenance burden.
- Advanced data cleanup and data handling to accommodate multiple facilities and data sources, including HL7 data and bulk user data uploads.
- Individualized radiologist dashboards for real-time updates on quality events, follow-up recommendations, and productivity.

Nuance values data privacy and does not keep your data longer than reasonably necessary. Our data retention policy defaults to 7 years within the hosted environment.

**About Nuance Communications, Inc.** Nuance Communications (NASDAQ: NUAN) is the pioneer and leader in conversational AI innovations that bring intelligence to everyday work and life. The company delivers solutions that understand, analyze, and respond to people—amplifying human intelligence to increase productivity and security. With decades of domain and AI expertise, Nuance works with thousands of organizations globally across healthcare, financial services, telecommunications, government, and retail—to create stronger relationships and better experiences for their customers and workforce. For more information, please visit www.nuance.com/healthcare or call 1-877-805-5902. Connect with us via the What's next blog, LinkedIn, Facebook, and Twitter.
