In today’s demanding healthcare environment, how can providers remain competitive, meet growing regulatory requirements, comply with quality measures, support population health management and transition to value-based care models?

Nuance PowerScribe 360 Reporting is the industry’s most trusted and widely used radiology reporting solution. This award-winning solution provides quick, efficient generation of high-quality reports that demonstrate improved clinical and financial outcomes. A portfolio of add-on options further increases functionality to meet ever-expanding demands for productivity, accountability, and interoperability.

With PowerScribe 360 Reporting, radiologists and their organizations can achieve measurable efficiencies and improved clinical performance, positioning themselves as leaders embracing technology and innovation in pursuit of quality.

**Advanced radiology reporting**
Powered by Dragon® Naturally Speaking® 12.5 PowerScribe 360 Edition, the solution combines ease of use with exceptional accuracy. Updated speech tools optimize performance, reduce turnaround time, improve accuracy, and increase user satisfaction.

**Smart AutoText**
Advances in AutoText technology accelerate report creation while ensuring thorough, compliant, and accurate content. Relevancy algorithms launch the right template based on report-specific criteria, while AutoTexts embedded within referenced fields facilitate report creation. New organizing tools improve AutoText accessibility and multi-site functionality.

**Multimedia reports**
Multimedia report capability enhances communication of radiology findings by correlating images with text reports to facilitate better understanding between referrers and patients.*

**New workflow options**
An improved overread process sends requests for additional report input to the appropriate specialist or section, with full support for resident/attending and attestation workflows in multi-contributor environments.

---

**KEY BENEFITS**

- Three out of every four radiologists use Nuance solutions for clinical documentation in the U.S.
- Structured data facilitates quality measure reporting, participation in registries, and data exchange with EHRs to reduce error-prone and time-consuming manual data entry.
- Flexible and personalized report-creation tools support rapid turnaround and ensure reports are accurate, consistent, and actionable.
- Cooperative development with leading EMR and RIS/PACS vendors ensures solutions work within existing infrastructures to maximize IT investment.
- Streamlined report generation and effective communication of clinical information throughout the enterprise reinforces continuous quality improvement.

---

* Requires downstream system compatibility.
Add value with other Nuance solutions

Expanding core functionality with add-on modules and complementary solutions can exponentially increase the value of your investment in Nuance technology and better position your organization for the future of radiology.

**Clinical guidance**
Easy, real-time access to current evidence-based guidelines at the point of documentation enables consistent follow-up recommendations, reducing variability, and improving patient outcomes.

**Advanced data integration with ModLink™**
Auto-import of measurement, dose, and other relevant modality information leverages existing workflows to improve report accuracy and consistency, saving time and eliminating duplicative data entry steps.

**Peer review**
Nuance offers several options for addressing radiologist quality assurance. Flexible and customizable approaches save time, improve efficiency, and drive quality improvements by eliminating cumbersome manual processes, facilitating program/campaign management, and supporting accreditation requirements.

**Follow-up management**
A proactive, systems-based approach closes the loop on patient follow-up to reduce risk of missed or delayed diagnoses and support improved outcomes. Intelligent recommendation identification and extraction along with workflow-based solution management simplify access to follow-up data and make it actionable.

**Lung cancer screening**
This end-to-end solution supports and automates lung cancer screening initiatives, proactively managing exams from enrollment through clinical follow-up, reporting, and uploading to ACR.

**Workflow orchestration**
A flexible vendor-neutral platform connects disparate systems, eliminates inefficiencies, and prioritizes patient care. It manages even complicated multi-site, multi-speciality environments to help ensure that the right study is assigned to the right radiologist at the right time.

---

“With PowerScribe 360, the ordering physician has the ability to start treating the patient sooner. More timely reporting means more timely treatments.”

— Carol Scoggins
System Executive Director,
Diagnostic Outreach
WellStar Health Systems
