

Nuance PowerShare Image Sharing and VitreaView universal viewer.

Easily integrate images into the primary clinical workflow using a browser, tablet or smartphone.

A powerful add-on to the PowerShare™ Image Sharing portfolio and available with a simple click, the VitreaView® enterprise viewer by Vital Images provides fast and secure web-based access to patient information providing a single point of access to DICOM and non-DICOM images on a browser, tablet or smartphone.

Challenge

In healthcare, the existence of diverse information silos often results in highly fragmented data viewing experiences and difficult, broken workflows. Lack of easy-to-use tools with the necessary breadth of access is a common roadblock that can hinder clinical access, physician collaboration and the delivery of optimal patient care.

Solution

A web-based universal viewer addresses the needs of both physicians and IT by providing a common and supportable infrastructure for delivering intuitive, fast, uniform access to patient imaging and related reports and documents. As part of the PowerShare Image Sharing portfolio of universal viewers, Nuance offers VitreaView,

a true zero-footprint viewer that works on a standard web browser with no plugins, and integrates directly into user workflows, providing access when and where it is needed.

Confidence when you need it

Fully integrated into the PowerShare Image Sharing experience, VitreaView provides validated diagnostic quality viewing with quick launch times and high-performance interactivity. This, coupled with ease of use, means that medical professionals can get the information they need in seconds and be productive immediately—allowing them to optimize their time and focus on patient care.

Easy to use; easy to deploy

Traditional departmental viewers are often built with the expert radiologist user in mind, using tools that can be confusing and difficult to learn and manipulate. Many universal viewers simply take these approaches and strip away features. The VitreaView enterprise viewer is different. It was designed from the ground up for clinician access; intentionally intuitive with minimal or no training required.

Key benefits

- Integrated viewer enables one-click access from PowerShare Network
 - True zero-foot print client—just use your existing web browser, no plugins required
 - Diagnostic quality viewer, designed for clinical users across the entire care team
 - Simple, intuitive, easy-to-use tool set provides streamlined performance to meet clinician needs, including radiology, cardiology, ultrasound, nuclear medicine and more
 - Enables viewing access to all your DICOM and non-DICOM images including mammography¹
-

“We realized that valuable radiologic images were not being fully utilized in patient care and that one of the main barriers to integrating these images into the workflow of reading radiologic reports was physician access. VitreaView integrates with our EMR and provides fast and convenient access to current images. The viewer, navigation, and tools are intuitive, so we did not need to invest in extensive training.”

Shafiq Rab, M.D.
Vice President and Chief Information Officer,
Hackensack UMC

VitreaView, alongside PowerShare Image Sharing, optimizes access to high quality images across disparate users. This is done by combining powerful, intuitive image viewing with the world's largest medical image sharing to connect securely with radiologists, healthcare organizations, referring physicians and patients—regardless of geographic location, medical discipline or technology platform.

At Nuance, we are constantly looking ahead to provide tools to meet today's needs and tomorrow's challenges.
