Convenient and secure image sharing—anytime, anywhere.

Access the industry’s largest network for easy, on-demand image exchange with PowerShare Image Sharing.

Approximately one-third of all medical imaging is unnecessary, costing the healthcare industry approximately $26 billion annually. Besides being expensive and often non-reimbursable, unnecessary imaging exposes patients to undue radiation and delays care.

If a critical stroke patient has to wait for a CD of their imaging before being transferred from a local community hospital to an academic medical center, then that CD winds up misplaced or unreadable, another set of scans will inevitably be ordered. This unnecessary delay in time to treatment significantly compromises patient care and jeopardizes their chance at the best possible outcome.

Furthermore, it is estimated that facilities that receive an average of 500 stroke transfer patients per year could save as much as $500,000 annually and accelerate patient care by harnessing the power of cloud-based image sharing to significantly reduce rescan rates.

Enable cloud-based access to patient imaging
With Nuance PowerShare Image Sharing, community hospitals can share patient imaging with the stroke center via PowerShare’s cloud-based image sharing network. This network enables access to medical images and diagnostic reports on-demand, without the need for costly VPNs or CDs.

More than 7,500 facilities already rely on the PowerShare Network, the nation’s largest connected network for image and report exchange, and those organizations are supported by PowerShare Outreach Services professionals. They streamline the network building process, connecting physicians and facilities—regardless of their location—on behalf of subscribers and in a matter of days.

No longer at the mercy of unreliable physical media or expensive, hard-to-manage VPN-based networks, healthcare organizations can reduce costs and immediately improve time to value through the PowerShare Network.

In less than 60 days, one national network of cancer care and research centers was able to connect to more than 250 sites, allowing facilities to send imaging

---

**KEY BENEFITS**

- **Simplifies and secures access** to imaging studies at the point of care, even when studies were performed off-site.
- **Streamlines the network building process** by leveraging the largest network of health organizations, with BAA agreements already in place.
- **Reduces costly** and unreliable image exchange methods.
- **Improves the patient transfer process** with streamlined treatment plans.
- **Avoids unnecessary radiation exposure** from redundant imaging to improve care quality and patient safety.
- **Grows revenue opportunities** in key service lines by offering sub-specialty or off-hour reading services.
directly from their PACS, nearly eliminating the need for physical media and decreasing time to treatment.

PowerShare Image Sharing is supported by a 24x7x365 domestic support center, available to the entire network of participants.

**Streamline workflows and enable faster patient treatment**
When a patient’s imaging is available via PowerShare, critical care and trauma teams can determine whether a transfer is necessary, and if so, prepare for the patient’s arrival and promote faster treatment. Access to imaging can also be available at the point of order, during radiology interpretation, and within EHR workflows.

**Eliminate costly image exchange infrastructure**
Instead of setting up and maintaining complicated VPNs, which only connect individual facilities, PowerShare uses a cloud-based infrastructure, making images available on both desktop and via mobile devices.

This eliminates the need for copying medical images to CDs and allows patient images to be transferred securely—without the potential for damage, loss, or encryption errors. Additionally, it avoids the manual and slow process of loading study data from CDs to the PACS.

**Expand opportunities**
With PowerShare organizations can grow revenue by expanding their subspecialty and/or off-hours reading services. PowerShare enables teleradiology workflows with remote reading of imaging studies, orders, and reports from a client’s native worklist, PACS, and reporting solution. Organizations can overcome costly and cumbersome VPN infrastructures, as well as optimize the utilization of subspecialty radiologists.

Organizations can also take advantage of an MPI to facilitate a Health Information Exchange or Image Aware network for more proactive and automated image exchange efficiency.

*Improve your patient outcomes and your bottom line with PowerShare Image Sharing*

Join the PowerShare Network to access and share medical imaging, build a dedicated community, and identify both new revenue streams and cost-savings opportunities.

“PowerShare has overwhelmingly improved the efficiency of our workflow, especially in regard to outside images. Physicians love that they don’t have to deal with a CD anymore. PowerShare takes their mind off of whether or not they can access an image—allowing them to focus on treating patients.”
