Cloud-based dictation is an antidote to burnout. It helps doctors feel better about documentation, more satisfied and freer to practice as they see fit.

Doctors that use speech recognition have up to 2 hours freed per day to spend with patients.

They feel more confident about technology and have a better experience.

They move freely, spend more time with patients and can go home on time.

Doctors are frustrated with time spent on clinical documentation and how it cuts into patient care – 88% report being moderately to severely stressed.

Doctors already use mobile phones for everyday tasks and are looking to make clinical documentation more portable too.

When doctors use cloud-based dictation, documentation becomes portable and astoundingly fast.

12,138 steps are taken by the average healthcare professional per day, 2.3 times more than the typical American.

4,000 clicks for an average day of documentation.

The average time spent in direct contact with patients.

Doctors that use speech recognition have up to 2 hours freed per day to spend with patients.

They feel more confident about technology and have a better experience.

They move freely, spend more time with patients and can go home on time.

Overwhelmed by documentation

43% of a doctor’s workday is spent on data entry.

4,000 clicks for an average day of documentation.

The average time spent in direct contact with patients.

Freedom comes at last

Cloud-based dictation is an antidote to burnout. It helps doctors feel better about documentation, more satisfied and freer to practice as they see fit.

Doctors that use speech recognition have up to 2 hours freed per day to spend with patients.

They feel more confident about technology and have a better experience.

They move freely, spend more time with patients and can go home on time.

The cloud delivers

35% of doctors using the cloud choose to dictate on a mobile device.

3X faster than typing on a computer, dictation averages 150 words per minute.

2.5 hours saved for every hour dictated.

Say hello to cloud-based speech
