

Your zero footprint gateway to electronic document capture.

WebCapture electronic business activities bring asset files together into a uniform, streamlined document workflow.

Not every business process originates on paper. And, not every document your team works on is paper-based either. Couple these challenges with the IT department's concern of installing extra software on your team's desktop computers and you have a real challenge. So how do you solve your need to introduce paper and electronic documents into the same secure, centrally administered workflow while accommodating your IT team's "no desktop software" policy?

Nuance WebCapture™ to the rescue. WebCapture leverages the power of AutoStore® by extending to your desktop the same document workflows used to capture your paper documents on an multifunction peripheral (MFP) or scanner—all from within your web browser. No extra software to install or support. With WebCapture, any file on your workstation is introduced into the AutoStore orchestrated workflow with ease, right from within your web browser.

Key benefits

- Extend to your desktop the same document workflows used to capture your paper documents on an MFP or scanner all from within your Web browser.
- Browse your available network folders or Microsoft® SharePoint® libraries directly through WebCapture's easy-to-use web interface to drop and index supporting claim material directly into the right location.
- Lower operational support costs and maintenance substantially.
- Personalize the business workflows extended to your team members.
- Accomplish fast keyword selection with dynamic database lookups from within the browser.
- Increase your team's efficiency and accuracy by having team members browse folders or SharePoint
- Audio accessibility allows those with visual impairment to interact with business processes.

Groupware & collaboration software systems

Document Management Systems (DMS)

File, fax and email services

Open connectivity

For example, claims processing focuses on prompt customer service and has a large number of documents that might be associated with a claim, all coming from a variety of sources. Most of the time, branch offices receive claims but the processing is handled at the central location. To initiate this document into your business process, just select the document and WebCapture will present the AutoStore workflows you're authorized to perform. In this case, you select the "claims processing" workflow and a few fields are then presented to you for keyboard entry. To accelerate key word entry and deliver higher accuracy, the value entered in one index field can trigger a database search to fill other fields automatically. Claims are delivered immediately and efficiently, saving both time and money, and giving you peace of mind.

But the power of WebCapture doesn't stop there. You can also browse your available network folders or Microsoft® SharePoint® libraries directly through WebCapture's easy to use web interface to drop and index supporting claim material directly into the right location. WebCapture performs database lookup, and lets you browse folders

and Microsoft® SharePoint®, all from within a web browser.

WebCapture aligns people, business processes and information with your business strategy and allows you to achieve true business transformation easily.

Highly deployable.

With no additional hardware or software configuration requirements, WebCapture avoids the extra burden of deploying in each client machine.

The user is no longer bound to location. So, if a PC can access the web, then it can use WebCapture. All that's required is permission for the user to access the system. Since configuration and deployment are limited only to the web server, management is much easier, and the reach is wide and mobile.

One touch multi-route.

Many times your document workflow is as simple as originating at point A and ending up at point B. But what happens if multiple colleagues and/or multiple systems need to have the document, too? With AutoStore, supporting multiple routing locations is a base capability. We call it "multi-route," and you will call it efficiency at its finest.

System Requirements.

– **AutoStore® 7.0 Server**

- Windows 8.0 (with latest service pack)\8.1—Professional & Ultimate (32\64 bit)
- Windows Server 2012 R2—Standard & Datacenter
- Windows Server 2012—Standard & Datacenter
- Windows 7 (32\64 bit) SP1—Professional, Ultimate, and Enterprise
- Windows Server 2008 R2—Standard, Enterprise, and Datacenter
- Windows Server 2008—Standard, Enterprise, and Datacenter
- Windows 10 Pro & Enterprise (32\64 bit)

Specific operating system variants (i.e., Professional, Standard, Enterprise...) are supported except Small Business Server/Domain Controllers

– **WebCapture™ 7.0 Client**

- Any Microsoft® Windows® OS which supports:
 - Internet Explorer® 9.0 and greater
 - FireFox® 4.0 and greater
 - Google® Chrome® 10.0 and greater

Now, your business critical workflows can be initiated from your web browser. In fact, all the business rules set up in AutoStore can be leveraged completely with WebCapture. It's a great way to maintain consistency and central administration of your business workflows.

Low-cost support and maintenance.

With WebCapture, the browser is the platform. There is no footprint. Software installation and updating is easier because it's in one place. Operational support costs and maintenance are substantially lower, as the application is distributed and maintained from a central source. Changes can be made quickly and rolled out across a widely distributed user base with no intervention from end users.

Secure and tight integration into your business process.

Take advantage of your existing network security infrastructure for user authentication (Microsoft® Windows®, Active Directory, LDAP) to personalize the business workflows extended to your team members. AutoStore, and each of its extended solutions, exposes only the processes available to your

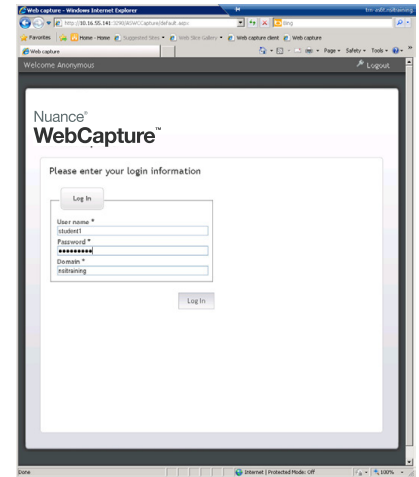

team. What's more, fast keyword selection can be accomplished easily by dynamic database lookups from within the browser. And, with the ability to have team members browse folders or SharePoint while inside the browser, your team's efficiency and accuracy will increase with Nuance WebCapture.

Maximize the power of AutoStore workflows.

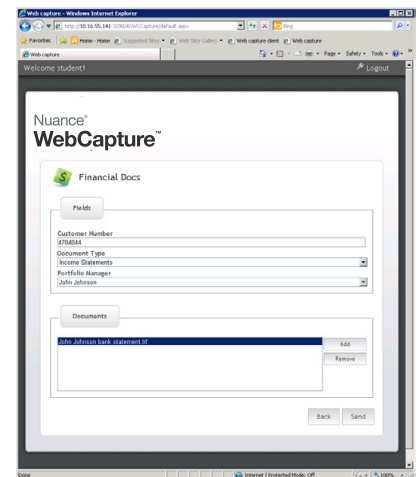

AutoStore is a server-based application which orchestrates the capture and secure delivery of paper and electronic documents into business applications. It's well suited for organizations of any size that want to eliminate error prone manual document handling, increase communication and collaboration, and use speed as a competitive advantage.

In addition to electronic documents, AutoStore captures paper documents at MFPs and scanners, converts them to the desired format, and then routes the document to a local network folder, fax server, content management system or custom line of business application.
